

CIRCUMCISION

1. Take adequate pain killer – this will usually have been prescribed by the anaesthetist. Your penis may be numb for several hours following the procedure as a nerve block will have been placed. If you get a significant pain while the bandage is in place, you should undo it immediately.
2. Apply Chloromycetin ointment on the sutures 3 x/day until it runs out.
3. Remove the dressing, shower and dab dry with a clean towel the morning after discharge. Try to keep your penis pointing upward in your underwear.
4. Report any excessive ooze or swelling in the operation site.
5. Arrange for review in the rooms in 6 weeks time.
